DÜSSELDORF: 23 January 2026: capricorn GROUP (capricorn), the German-based industry leader in automotive and motorsport lightweight technology, will present two capricorn Zagato 01 hypercars at Salon Rétromobile, Paris, 27 Jan – 1 Feb 2026. The first customer deliveries will happen in 2026, following an intensive and rapid development process, borne out of capricorn's extensive motorsport engineering experience.

Both capricorn 01 Zagato hypercars are fully functional, drivable prototypes and a third example is currently under build at capricorn's Mönchengladbach's production facility. All three models will play a pivotal role in capricorn's test and calibration program, as the brand rapidly accelerates towards a handbuilt production run strictly limited to 19 coupes, priced at €2.95 million later this year.

Featuring a body designed by Zagato, the capricorn 01 Zagato is a mid-engined, rear-wheel-drive, manual transmission hypercar, engineered and handbuilt by capricorn in Germany to deliver a pure, immersive, analog driving experience.

The global unveiling of the second capricorn Zagato 01, which features new exterior and interior colors, a configuration never previously revealed in public, as well as technical improvements follows just three months after the global debut of the first capricorn Zagato 01, finished in Verde Knokke green with Brown Connolly Leather interior, at Zoute Grand Prix, Belgium, in October 2025.

The new capricorn 01 Zagato will be unveiled on the Supercar Owners Circle (SOC) booth within the Ultimate Supercar Garage at Salon Rétromobile, Paris. The event will also mark the launch of a new partnership between capricorn and the SOC, the world's most exclusive network of car collectors. The capricorn 01 Zagato previously

shown at Zoute Grand Prix, will be presented in collaboration with capricorn's design partner Zagato on the booth of luxury Swiss watch brand Chopard.

Robertino Wild, CEO of capricorn, commented: "For capricorn, progress is measured not in announcements, but in the quality of the cars we put on the road. Each prototype of the capricorn 01 Zagato allows us to deepen the relationship between design, engineering and driver – and to validate our decisions under real conditions before production begins later this year. Creating prototypes in rapid succession, with another already taking shape in Germany, underlines the clarity of vision behind this project and the dedication of the team bringing the capricorn 01 Zagato to the road."

The entire series will be offered exclusively through prominent premium and luxury automotive retailer Louyet Group. A minimal number of build slots remain, and the first customer deliveries are already planned for 2026.

Since the first prototype's debut, capricorn's engineering team has carried out extensive calibration work, fine-honing the character and response of all of the hypercar's components, including the 900PS 5.2-liter supercharged V8 engine, five-speed manual transmission, Brembo carbon ceramic brakes and Comfort, Sport & Track driving modes, which are manually selectable from within the cabin.

The LMP1-inspired, all-carbon fiber monocoque body and chassis of the capricorn 01 Zagato has also undergone intensive evaluation, as has the double wishbone, and pushrod BILSTEIN damper suspension system. Developed at the Nürburgring, the BILSTEIN EVO R weight-optimized suspension system provides ultra-precise damping characteristics. The combination of enhanced rigidity and ultra-responsive damping makes the EVO R the perfect match for the capricorn 01 Zagato, and the car immediately demonstrated exceptional dynamic performance on BILSTEIN's 7-post test rig.

The first capricorn Zagato 01 will be presented at Salon Rétromobile in collaboration with capricorn's design partner Zagato and luxury Swiss watch brand Chopard on the Chopard booth in Pavilion 7.3. The hypercar will be available for viewing from 6.00PM on the preview evening of Tuesday, January 27th, until the event concludes at 7PM on Sunday, 1st February.

The second, new, capricorn Zagato 01 will be unveiled on the Supercar Owners Circle booth in the Ultimate Supercar Garage in Pavilion 4. The hypercar will be available for viewing from 6PM on the Ultimate Supercar Garage preview evening of Wednesday, January 28th, until the event ends at 7PM on Sunday, 1st February.

capricorn 01 Zagato: Technical Specifications

- Engine: 5.2-liter Supercharged V8 (further developed by capricorn, see details in main text)
- Horsepower: 900+PS (662 kW) (subject to final homologation results)
- Torque: 1,000 Nm

- Max RPM: 9,000 rpm
- Dry Weight: <1,200 kg
- 0-100 km/h: <3 seconds
- Top Speed: 360 km/h
- Transmission: 5-speed Dogleg Manual, Rear-wheel-drive
- Chassis & Body: All-Carbon Fiber Monocoque & Subframes
- Suspension: Double Wishbone, Pushrod Bilstein dampers, 4-Wheel Lift System. Comfort, Sport & Track driving modes, manually selectable from within the cabin
- Brakes: Carbon Ceramic Discs (Brembo)
- Wheels: 21-inch (Front: 9.5-inch width, Rear: 12.5-inch width), choice of Lightweight Alloy and Carbon Fiber
- Interior Materials: Connolly Leather, Alcantara, milled Titanium, Aluminum, Carbon Fiber
- Trunk Volume: 110 liters
- Production Run: 19 units
- Price: €2.95 million (pre-tax, ex-works)
- Two-year warranty
- Four-year servicing package
- European homologation (inc. U.K., Switzerland, Japan, Mexico, Canada, Middle East)

-ENDS-

About capricorn GROUP

With a history dating back to 1933, capricorn GROUP (capricorn) is a specialist lightweight supplier in the automotive, medical and aerospace industries with six production facilities in four countries (Germany, UK, France and Italy) with close to 500 employees across Europe, and their headquarters in Düsseldorf, Germany. capricorn has primarily focused on lightweight production in the carbon fiber and mechanical parts sectors and supplies both the series and prototype industry with a clear focus on technology leadership in its activities.

capricorn began by specializing in the deep drilling and honing of high-precision components before expanding into cylinder liners, Formula 1 engine blocks, and precision forged pistons. Today, capricorn is a leading supplier of high-end precision engine components for global motorsport, niche OEM automotive, aftermarket, and aerospace clients. Driven by its values of quality, cost, and delivery, capricorn applies agile manufacturing, structured process controls, and continuous improvement to deliver world-class products and sustain long-term growth.
